

Hydraulic roll cutting machine

We offer also machines which cut remaining rolls out of the production of paper or packaging industry from printing offices and textile industry. These heavy rolls cannot be cut by a normal cutting machine efficiently and safely. This „Guillotine“ roll cutting machine has no problems with these rolls. The machine is available in different models. It can be used to cut paper, plastics and aluminium foil. We offer roll cutting machines for rolls up to a width of 3.000mm and a roll diameter of 1.200 mm. The different types are also available to handle with the extra great roll diameter of 1.200 mm. This is shown by an A after the model designation.

Technical data:	G-25 (G-25A)	G-35 (G-35A)	G-50 (G-50A)
Drive in kW	5,5	5,5	7,5
Cutting width in mm	1.500	2.000	2.000 - 3.000
Roller diameter in mm	850 (1.200)	850 (1.200)	850 (1.200)
Cutting time in sec.	60	60	60
Diameter of the hydraulic cylinder in mm	140	2 x 125	2 x 140
Maximum allowable pressure in bar	200	200	200
Shear force in tons	30	2 x 25	2 x 30
Contnt oil tank litres	90	110	140
Weight in kg	2.500 (1.850)	3.000 (2.700)	3.500 (3.450)
Minimum ambient temperature in °C	+5	+5	+5
Sound level in dB(A)	<80	<80	<80
